

NiceHash Compatible Program

nicehash.com

What is NiceHash Compatible Program?

NiceHash Compatible Program is a business and co-marketing partnership between **NiceHash** and **mining hardware manufacturers**. NiceHash wants to create close relationships with ASIC manufacturers to **help end-customers** and **business customers** make better purchasing decisions when investing in mining equipment.

By entering this partnership, mining manufacturers gain **recognition** and **co-marketing opportunities** by the **world's largest hash power broker** and marketplace.

Hash Power Broker

ASIC Manufacturers

ASIC Miners

Why did NiceHash create NiceHash Compatible Program?

NiceHash users, professional miners and mining managers, in general, inquire about ASIC compatibility all the time and usually, **they don't buy certain ASIC models** because there is no information about NiceHash compatibility with ASIC machines. Sometimes users already buy ASIC machines only to find out they can not connect them to NiceHash stratum servers. This creates a **bad customer experience** and **NiceHash is committed to change that.**

- X** Compatibility Issues
- X** Profit loss for Miners
- X** Profit loss for ASIC manufacturers

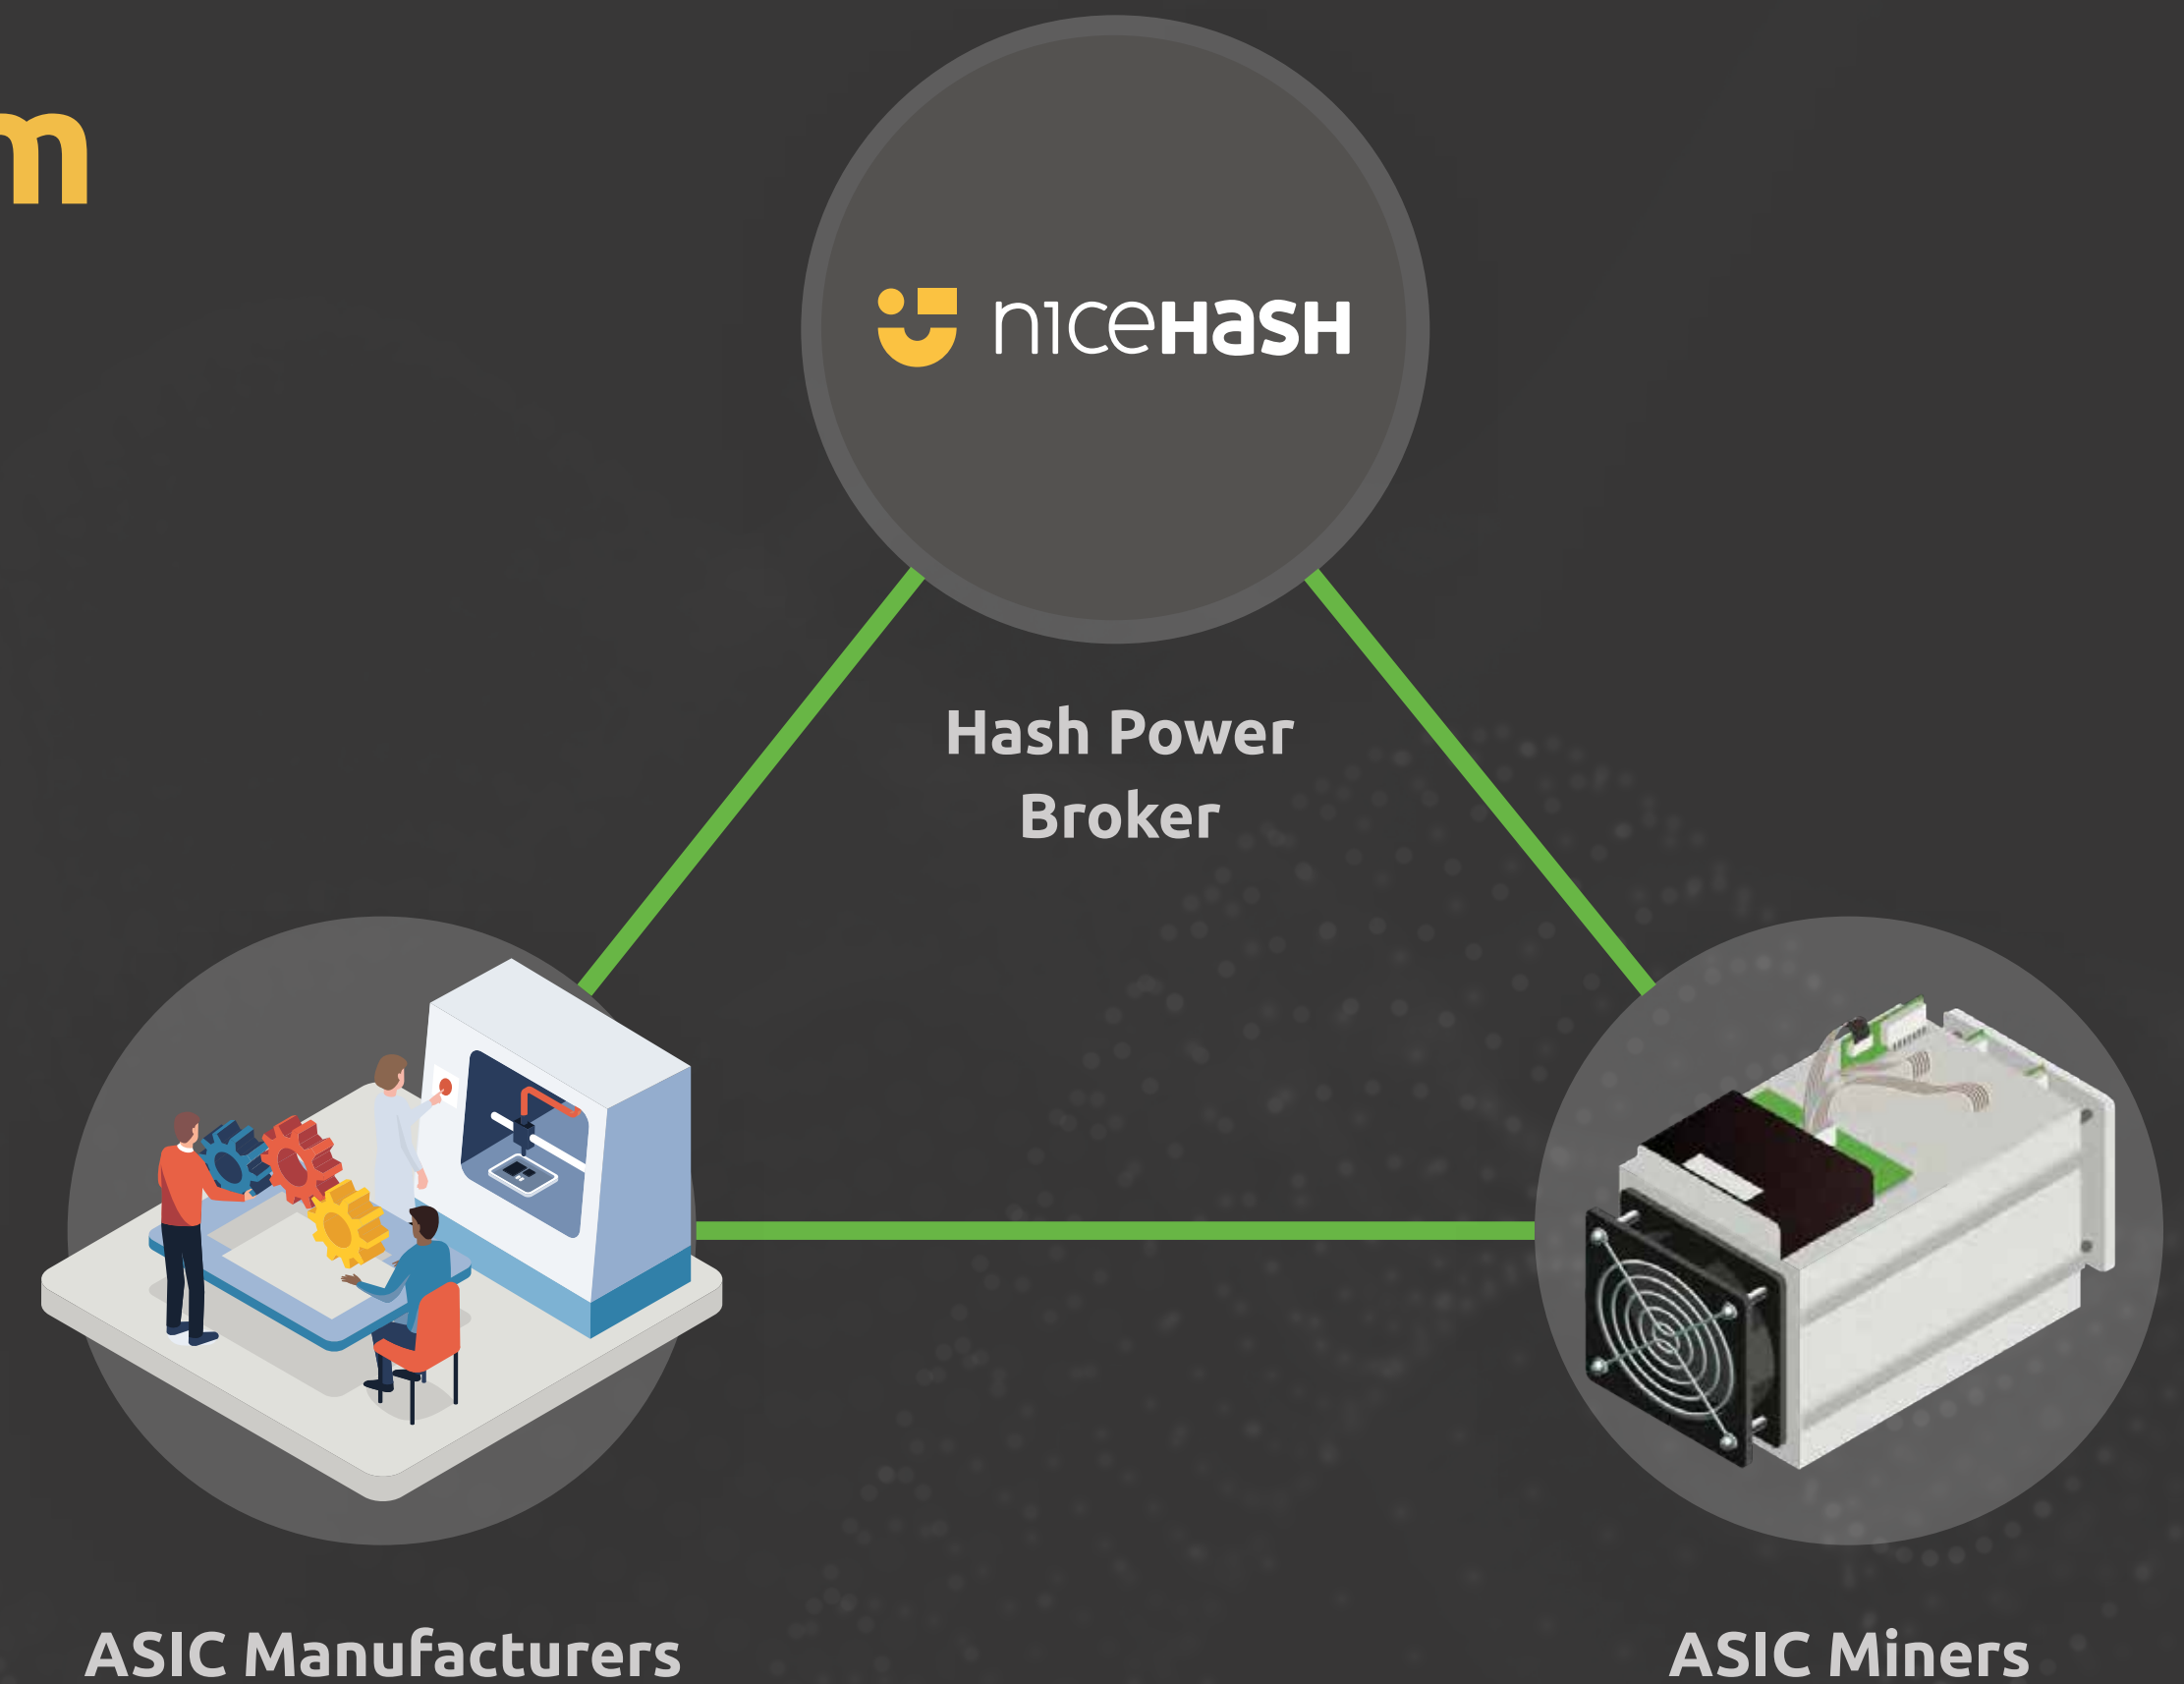

ASIC Miners

NiceHash Compatible Program

With our partners, **we would like to help** and create **a better experience for everyone** involved in the cryptocurrency mining business. NiceHash would like to help customers and users by partnering with ASIC and mining hardware manufacturers to **provide compatibility** information prior to ASIC release and also **offer software development support** to manufacturers to make mining hardware **NiceHash compatible**.

NiceHash Compatible Badge

Who can enter NiceHash Compatible Program?

NiceHash invites **all mining hardware manufacturers** to **join this program**. Together we can create a more **transparent** and **friendly purchasing experience** for customers and miners **around the world**.

NiceHash would test the mining equipment or ASICs for NiceHash compatibility and grant the **“NiceHash compatible” badge** to every ASIC or mining machine that is capable of connecting to NiceHash stratum servers.

“NiceHash compatible” badge can be used with every product specification list online and every sales promotion.

What if the ASIC or mining hardware is not compatible with NiceHash?

By entering the **NiceHash Compatible Program**, we offer full software support to every ASIC manufacturer to gain **100% compatibility** with NiceHash.

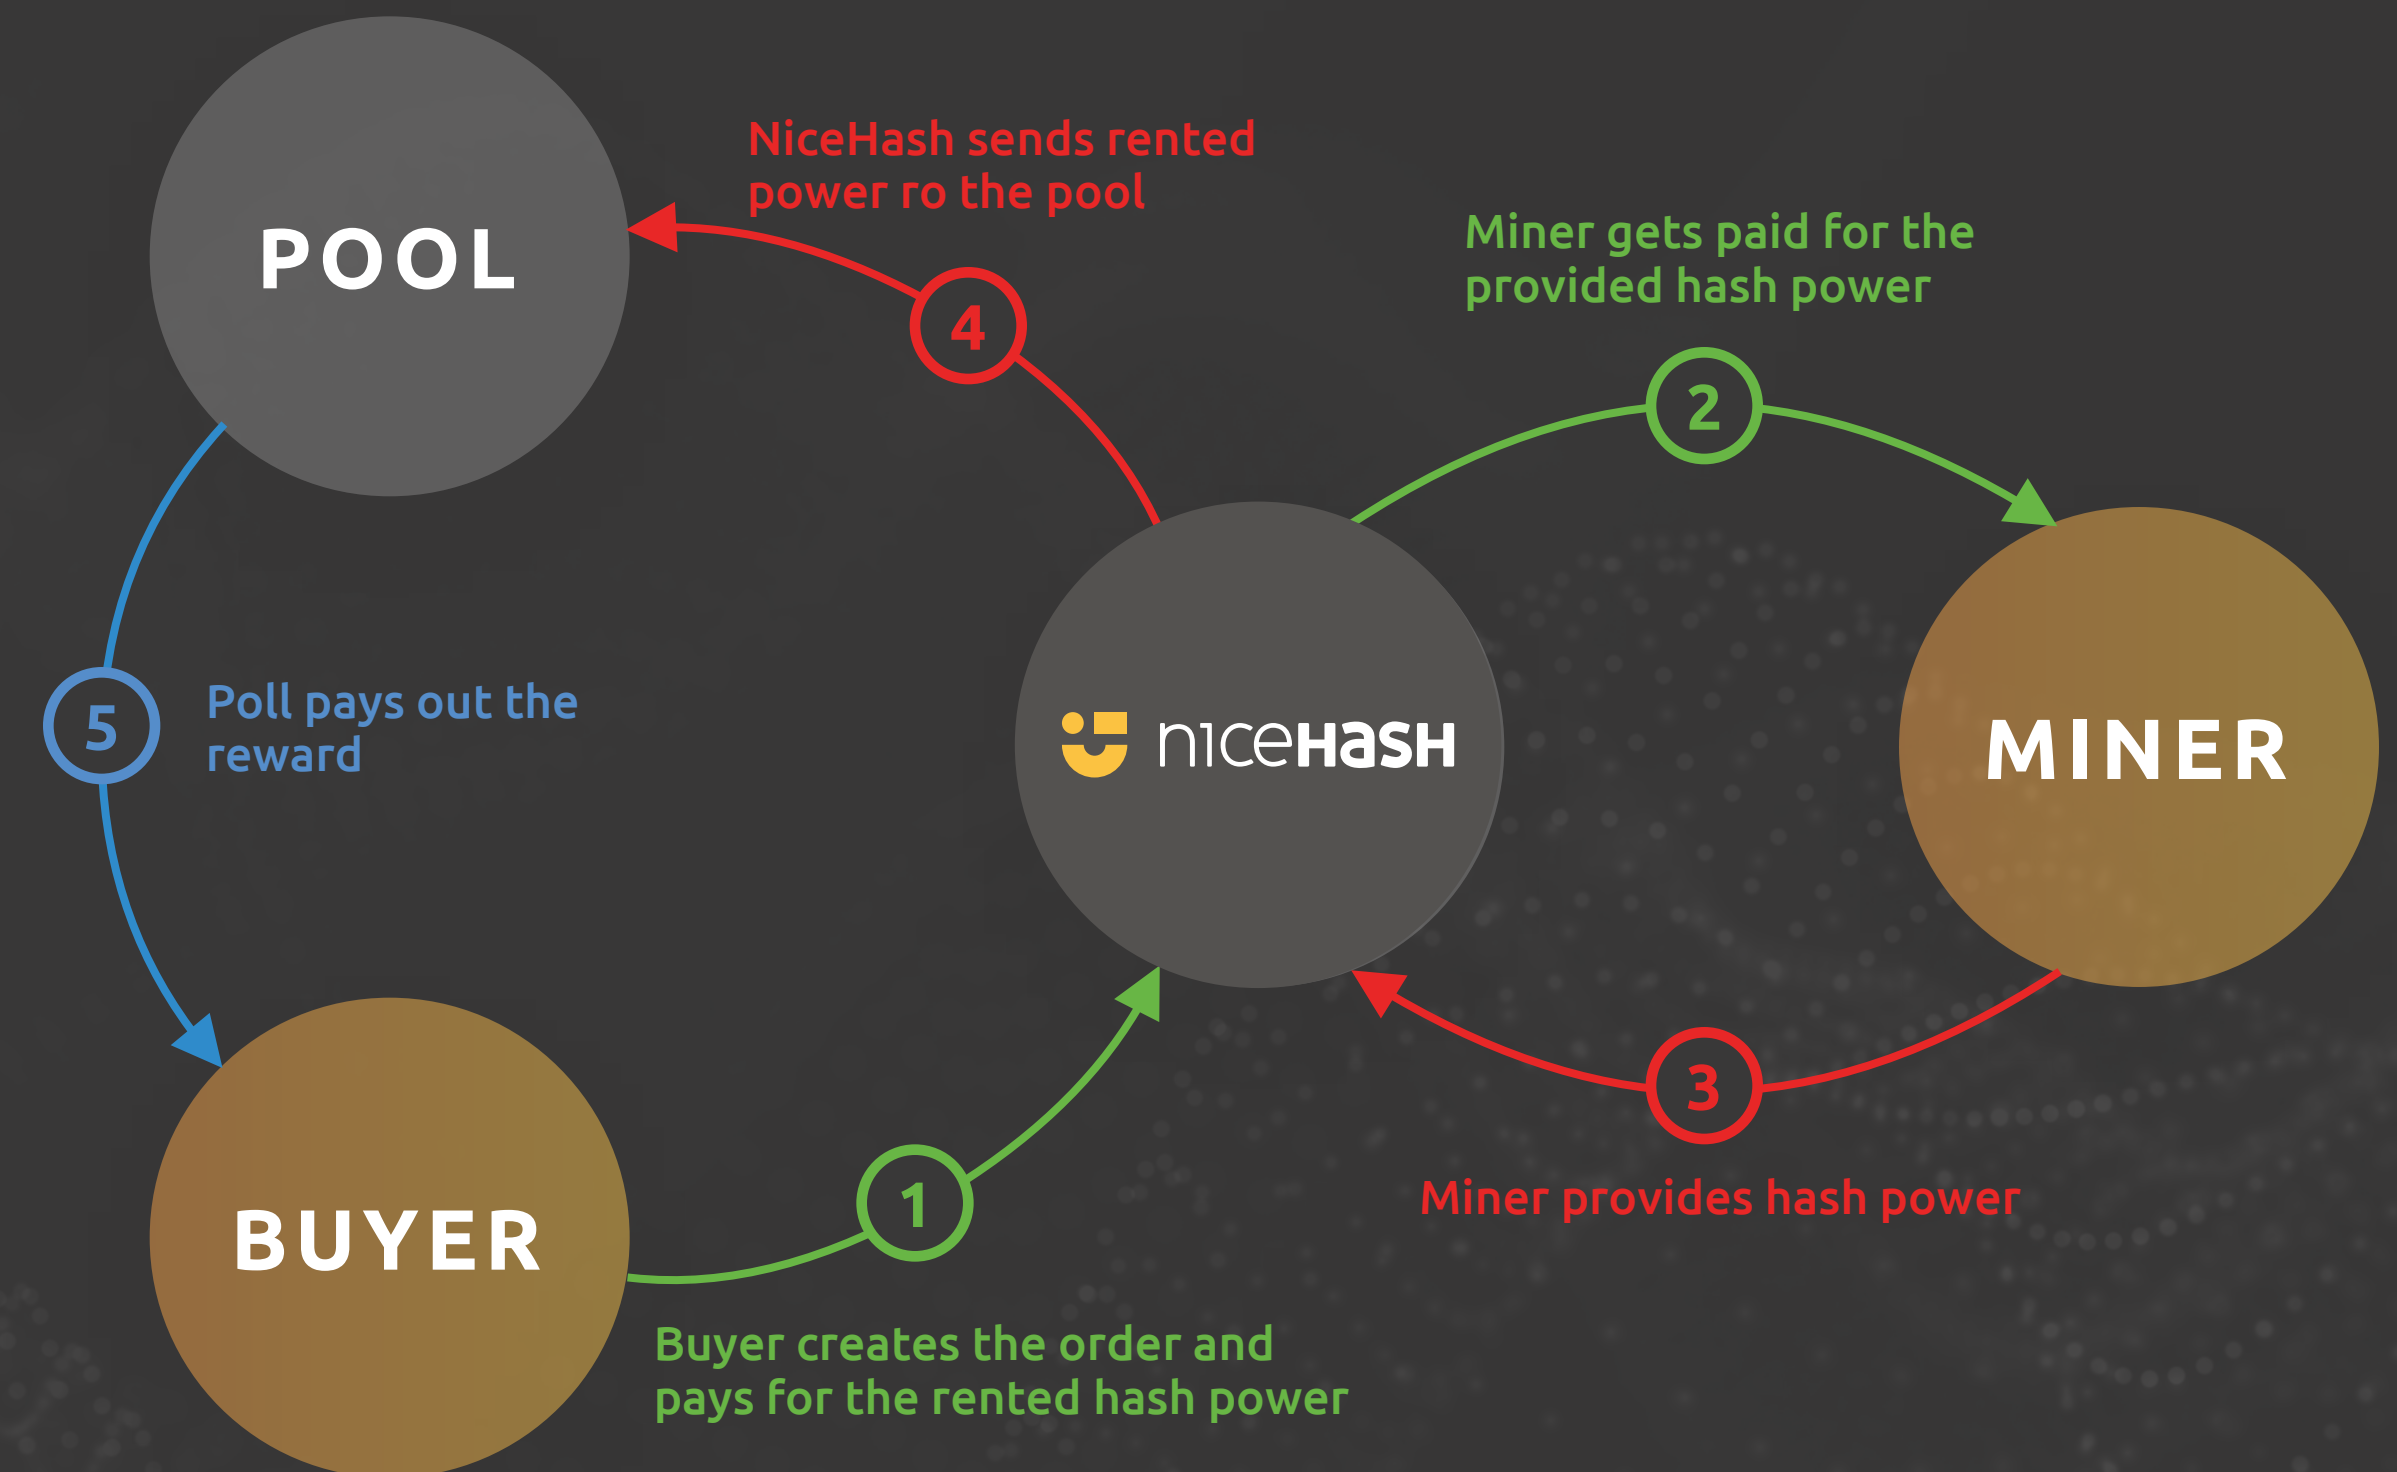

NiceHash will offer you full development support.

Why partner with NiceHash for NiceHash Compatible Program?

NiceHash is the **largest hash power broker marketplace** that connects **sellers** or **miners** of **hash power** with **buyers** of **hash power**.

NiceHash service is unique in a way that only connects different end-users and is not offering any cloud mining options - meaning NiceHash does not own or rent out any mining equipment.

Where can I apply for NiceHash Compatible Program?
